Subject: Re: The Process for handling allegations of the responsible conduct of research

Dear All:

I welcome the data deposition. In fact, the steps towards this have already been taken and the DIPP study group has discussed and approved the deposition. The data were originally submitted from VTT in 2013 as part of the EU FP7 COSMOS project, in private mode, and not yet anonymised. This submission will now be anonymised. Mikael Knip is currently overseeing this process, which is near completion.

I have assurance from MetaboLights team at EBI that they will proceed with the prioritized validation process as soon as possible. We have been waiting for the completion of the investigation to proceed with next steps.

I have also been in contact with the chief editor of JEM, who welcomes the deposition, and they will append the publication by providing the link to the data.

The date for data release was originally set for January 2017. We will change the release date to an earlier one, i.e., as soon as the data submission is validated by the MetaboLights team. I will notify JEM and all authors as soon as the link to the data becomes public.

Best regards,
Matej
